

Institute Technical Summer Projects (ITSP)

Project Reference Documentation

Team Name	
Project Title	
Domain / Category	<i>e.g. Robotics, Physical AI, Medical Devices, Embedded Systems</i>
Mentor(s)	

1. Team Members

List every team member with their official roll number (format: 25BXXXX).

S.No.	Name	Roll Number	Role / Responsibility
1		25B_____	
2		25B_____	
3		25B_____	
4		25B_____	

2. Project Details

2.1 Problem Statement

[State the real-world problem being addressed, who is affected, and why the existing solutions fall short. Keep it to 3–5 sentences and be specific — quantify the problem where possible (e.g. prevalence, cost, failure rate).]

2.2 Solution Proposed

[Describe the proposed technical approach/design at a high level. Include the core working principle, key subsystems, and what makes the approach novel or better suited than alternatives.]

- Core mechanism / working principle
- Key subsystems or modules
- What differentiates this from existing solutions

2.3 Work / Simulations Done Till Now

[Summarize progress chronologically: literature review, design iterations, CAD models, FEA/simulation results, prototypes built, tests run, and key findings. Reference specific tools used (e.g. SolidWorks, ANSYS, MATLAB, ROS).]

- Literature review / design study completed
- CAD models / simulations built (tool used, key parameters)
- Prototypes fabricated and tests conducted
- Key results or design decisions arrived at

2.4 Timeline for Remaining Work

[Outline milestones for the remaining project duration with target dates.]

2.5 Expected Outcome / Deliverable

[Describe what will be demonstrated at the end of the project — a working prototype, a validated simulation, a tested subsystem, etc.]
